

Reaction Time Game — schematic

Drawn from the verified netlist in hardware/interconnect.md. Not a CAD export; there is no PCB project for this build.

Yuri (Iurii) Tiutvin

Rev 1 · 2026 · Sheet 1 of 1

1 · INPUT AND DEBOUNCE

2 · POWER PATH AND CHARGING

measured: 0.28 V across D1 with the game running; 0.2 mV at VSYS with SW2 open

3 · START LIGHTS

PWM 1 kHz, duty 2000/65535 (about 3 %)

3 mm red, Vf about 2.0 V, 8.7 mA peak

4 · DISPLAY

400 kHz; module carries its own bus pull-ups

5 · BUZZER AND MUTE

tones 150 Hz to 1200 Hz, duty 24000/65535

sound on: COM on NC, piezo grounded, GP7 pulled high.
muted: COM on NO, piezo leg open, GP7 pulled to ground.
